Education

Maharashtra Institute of Technology (MIT-WPU) <i>B.Tech in Computer Science & Engineering</i>	2021 – 2026 <i>Pune, India</i>
Indian School Al Wadi Al Kabir <i>Senior Secondary (CBSE) – Class XII</i>	2020 <i>Oman</i>

Technical Skills

Languages: Java, Python, SQL, JavaScript, TypeScript
Backend: Spring Boot (MVC, Data JPA), Node.js, Express.js, REST APIs, JasperReports
Frontend: React.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Thymeleaf
AI/ML: RAG Architecture, Vector Embeddings, LangChain, Google Gemini API, Sentence-Transformers
Databases: Oracle Database, ChromaDB (Vector), SQLite
Tools & Cloud: Microsoft Azure (AZ-104), Docker, Git, Maven, Postman, Linux

Certifications

Microsoft Certified: Azure Administrator Associate (AZ-104) *Mar 2024*
Issued by Microsoft | [View Credential](#)

Experience

Credence Analytics <i>Backend Developer Intern — Project: MercuryFx</i>	Jun 2024 – Jul 2025 <i>Mumbai, India</i>
- Engineered a new module for Early Delivery Contracts (EDC) for major clients like SBI, including the creation of 5+ normalized database tables and 12 RESTful API endpoints. - Optimized backend communication using asynchronous patterns, reducing backend processing time by 30% and slashing manual verification time by 40%. - Implemented JSON Web Tokens (JWT) for secure data transmission and resolved critical bugs to prevent PII exposure, ensuring 100% compliance with RBI guidelines. - Streamlined server-side validation with efficient database queries, ensuring accurate voucher linkage and reducing processing errors by 23%.	

Projects

VAULT – Enterprise-Grade AI Knowledge Platform Source Code	Aug 2025 – Present
Architected a scalable multi-tenant RAG platform using a microservice-based design, fully decoupling the Node.js API from heavy tasks to eliminate timeouts. Built a Redis-backed BullMQ document ingestion pipeline, shifting 75s+ uploads to a <100ms non-blocking call with fault-tolerant background processing. Developed a Python (FastAPI) parser using unstructured.io for OCR and layout extraction, capable of handling complex and scanned PDFs reliably. Reduced query latency from 21s to sub-second by converting the Python embedder into a persistent FastAPI microservice with an in-memory model. Frontend: Built a real-time React UI with Socket.io token streaming and Multi-Level RBAC.	
Monthly Flash Reporting System (MFRS) Source Code	Jun 2025 – Jul 2025
- Engineered a full-stack web application using Java and Spring Boot to automate the generation of 15+ monthly financial flash reports. - Designed dynamic JasperReports templates with 20+ dynamic fields to generate complex PDFs from an Oracle database; managed build lifecycle with Maven.
